Nephritis, Nephrotic Syndrome, & Nephrosis	14.5
Intentional Self-Harm (suicide).....	10.5
Infant Mortality	6.9

Notes:

1 Only one year of U.S. data are given to compare with five years of state and county data because the numbers on the national level are much greater and do not fluctuate as much annually.

2 Data for mothers who used tobacco or consumed alcohol while pregnant are self-reported.

3 The fertility rate is all births per 1,000 females age 15-44.

4 Teenage pregnancy rate is live births, fetal deaths, and abortions per 1,000 females age 15-17. The U.S. teenage pregnancy rate is from 2000.

5 The mortality rates, except infant mortality are age-adjusted death rates per 100,000 population. Age-adjusting to the standard million population eliminates differences between populations, making them easier to compare. Infant mortality is calculated as the number of infant (less than one year old) deaths per 1,000 live births. The U.S. mortality age-adjusted rates are 2003 provisional data except for female breast and prostate which are from 2002.
